Educational Qualification: M. Pharm

Year of Registration: 2018

Project Supervisors: Dr. S. N. Meyyanathan

Research Abstract (Not more than 100 words: Please work on this space creatively to brand your Portfolio)

Among analytical researchers, to date there is no or negligible experience or exposure with the analytical Quality by design (AQbD) approach for analytical methods.

Also the literature survey revealed that method development by LC-MS-MS through QbD approach for the estimation of Alectinib and Baricitinib in their formulations have not been reported.

The main objective of this work is to develop a sensitive, reliable, rapid, selective, accurate LC-MS-MS methods through QbD approach for the quantitative estimation of anti cancer drugs in formulation. It would also help to validate the developed LC-MS-MS methods for the estimation of anti cancer drugs in formulation.
